Moduli
τ_u — up-type quarks
τ_d — down-type quarks
τ_l — leptons (constrained)
τ_l — leptons (unconstrained)
Symmetric points
τ_u
fluxes: $(-45, -14, -4)$
$|D_\tau W| = 0.076$
$\tau \to \tau - 2$
τ_d
fluxes: $(-50, -17, -13)$
$|D_\tau W| = 0.227$
τ_l **(constrained)**
fluxes: $(-15, 4, -4)$
$|D_\tau W| \sim 0.1$
$\tau_l - 2$ (FD image)
τ_l (unconstrained)
